Software Developer Course Assessment – QAP 1

Course Name: Database Programming and Data Processing

Name: John Limon

Instructions:

You are allowed to complete the assessment problems below in whatever way you can but please answer the following questions/points as part of your submission:

1. How many hours did it take you to complete this assessment? (Please keep try to keep track of how many hours you have spent working on each individual part of this assessment as best you can - an estimation is fine; we just want a rough idea.)

   2-3hrs a day, including rewatching some parts of the lectures.

2. What online resources you have used? (My lectures, YouTube, Stack overflow etc.)

   Video lectures of Peter our instructor, materials on our daily work, YouTube videos very helpful.

3. Did you need to ask any of your friends in solving the problems. (If yes, please mention name of the friend. They must be amongst your class fellows.)

   Yes, my wife Jelliebeth we study together.

4. Did you need to ask questions to any of your instructors? If so, how many questions did you ask (or how many help sessions did you require)?

   No, but we're joining support session to learn from others & sometimes Peter's further explanation of the QAP.

5. Rate (subjectively) the difficulty of each question from your own perspective, and whether you feel confident that you can solve a similar but different problem requiring some of the same techniques in the future now that you've completed this one.

   For me this QAP is just a blend of easy and hard, but in general it's in moderate, especially for student like me not Techy and just started to learn in Tech world.

   Using the Git and GitHub, it's super useful. We used this in Semester 2 in our Team Sprint, it would be nice if this will be included in earlier semester. I get to understand more now that we have it as part of the lecture ☺
